FOREWORD

Agriculture generates more than one billion dollars in direct sales and has an estimated annual impact of almost 4 billion dollars for the economy of San Diego County. It is the county's fourth largest industry and ranks in the top ten nationally in a variety of categories. The county's agriculture is first in the value of nursery & greenhouse/mushrooms & sod crops sold; first in the number of small farms and first in avocado acreage and production. It also ranks in the top twenty in a variety of other categories.

Agricultural production in San Diego County occurs in an ag-urban interface that results in unique challenges and opportunities for local growers. Urban growth, competition for resources, expensive land and water, environmental constraints and increased foreign competition are a few examples of the many challenges affecting local farmers. On the other hand, the proximity and access to a large local market, the availability of services, and a well-developed infrastructure result in unique opportunities for local growers. The current status of the county's agricultural industry indicates that growers have adapted to changing conditions, thus making agriculture as successful as it is. Furthermore, now more than ever growers need to be skillful and stay informed in order to overcome the ever increasing challenges and capitalize on the opportunities present in San Diego County.

This *"Agricultural Directory and Guidelines for Agricultural Enterprises"* is intended to assist local growers in their efforts to remain competitive by providing them with a handy and useful resource. The information presented will help new and existing growers with their efforts to start new farm enterprises or to diversify existing farm businesses. In addition, the directory will also direct prospective growers to a variety of contacts, offices, agencies, resources and sources of information that may provide the specific answers and assistance they need.

The use of trade and agency/business names is for information purposes only. No endorsement is intended or implied by the authors or the University of California Cooperative Extension, San Diego County Farm and Home Advisor's Office. The directory is an evolving document and appropriate updates will be made as needed.

We are hopeful you will find the *"Agricultural Directory and Guidelines for Agricultural Enterprises"* useful for your operation. Should you have any question or comment about the directory or the information provided, please contact our office at (858) 694-2845.

Sincerely,

County Director
University of California Cooperative Extension
San Diego County Farm & Home Advisor's Office

Overview of San Diego County Agriculture

San Diego County agriculture generates over 1.2 billion dollars annually. It is the fourth largest industry in the county and prominently ranked nationally. San Diego County agriculture ranks first in the value of nursery and greenhouse crops, mushrooms and sod crops sold; first in the number of small farms, and first in avocado acreage and production. In addition, local agriculture ranks in the top twenty in a variety of other categories. Despite the prominent national rankings, the overall value, and its importance for the local economy agriculture is perhaps the best-kept secrets about San Diego County. As a result, visitors and residents alike do not think of San Diego as an agricultural county. They are amazed when they learn about the diversity, beauty, richness and economic contribution of agriculture in the county. Local agriculture can be described in many different, yet correct ways. It is often described as different, unique, diverse, high value, challenging, and expensive. What is it that makes the county's agricultural industry so special? This paper will describe key elements and local conditions that contribute to make San Diego County agriculture the successful and important industry that it is today. In addition, summarized crop values by selected commodity groups and summarized value of major crops for 2002 along with a summarized value for major crops for 1995-2002 are presented for illustration purposes.

- **Mild Climate** - Average annual temperatures of 63.2 degrees and sunshine for 70 % of the time make San Diego one of the most temperate areas in the world. Combine this with the many sub-climates present in the county and the result is year-round production of a variety of crops and livestock products. In fact, over 200 crops are commercially grown in San Diego County including an astonishing variety of flowers and ornamentals, fruit, and vegetable crops.
- **Expensive Land** - The value of agricultural land in San Diego County is more dependent on the real estate value than the value as an agricultural input. The result is that San Diego County has one of the highest prices for farmland in the country. This makes it difficult for new entry growers because of the large capital investment needed.
- **Poor Soils** - San Diego County soils are generally poor and unsuitable for agricultural purposes. Only six percent of the soils in the county are considered prime for agricultural use. As you might expect, most of this prime soil is rapidly being developed or is unavailable for farming. San Diego County farmers must work hard to improve the soils available and to find crops that are suited for the specific characteristics of the soil type in their farms.
- **Expensive Water** - Water prices and water availability are the main concerns for grower in San Diego County. This should not be a surprise because our growers pay some of the highest prices for agricultural water in the state. Our water rates can be as high as 30-times more than those of the Central Valley Project or the Imperial Irrigation District. In addition, availability of water for agricultural uses is also a top concern. Prospective growers should pay close attention to this issue when considering property sites.
- **Small and Numerous Farms** - According to the San Diego County Agricultural Commissioner there are over 6500 farms in the county. Our farms and ranches range in size from 0.5 acres to over 7000 acres and have an average size of 79 acres. However, 65 % of our farms are nine acres or less and 90 % are less than 49 acres. This makes San Diego the county with the highest number of small farms and the second highest total number of farms in the country.
- **Growth and Urbanization** - Agricultural production occurs in an agricultural-urban interface that characterizes San Diego County. In addition to the City of San Diego (second largest in California and sixth largest in the country) there are seventeen other incorporated communities

in the county. The county's population is increasing rapidly and is fast approaching 3 million people. This will result in more demand for resources and increased constraints for local farmers, making agricultural production even more challenging.

- **Local Markets and Direct Marketing** - Most of San Diego County agricultural products are exported to other areas of the country or the world. However, the large local market combined with the size of our farms and the diversity of crops grown has made direct marketing to local consumers an increasingly important activity. In addition to more than 20 Certified Farmers' Markets (CFM), there are countless roadside stands, u-pick operations and Community Supported Agriculture (CSA) programs operating in the county. These result in many local agricultural products being consumed locally. Most importantly, however, this type of activity keeps the connection between the agricultural and urban segments of San Diego County alive.
- **Environmentally Sound Production Methods and Systems** - Because of the challenges facing agricultural production in an ag-urban interface, San Diego County growers use a variety of production practices, techniques and systems that are environmentally sound and at the forefront of the industry. These have resulted in the use and implementation of production practices that promote a more efficient use of limited resources and minimize the impact to the environment.

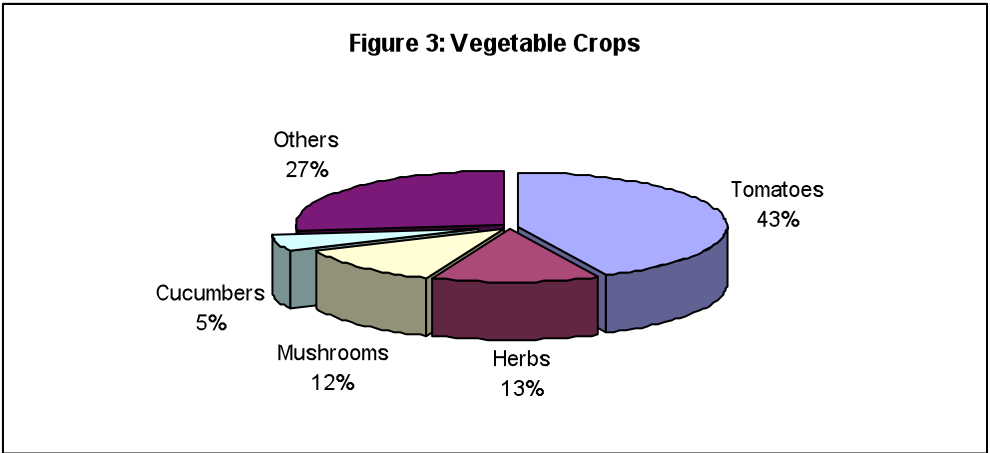

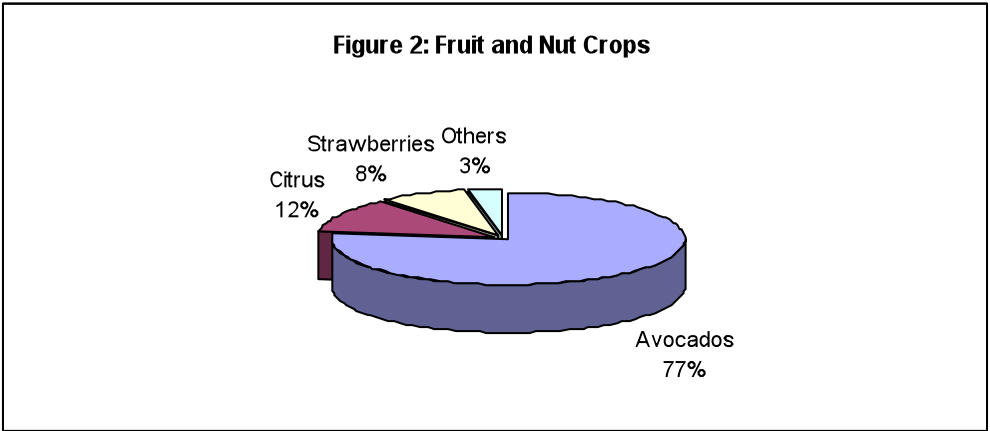

Despite all the challenges, San Diego County agriculture is thriving and is clearly a successful and vital industry for the county's and the region's economy. Figures 1 through 3 provides a summary of the breakdown in values for selected commodity groups for the 2002 crop year. Figure 4 presents a breakdown of the percentage value for all major crops produced in the county during 2002. Table 1 provides a breakdown of the total value for all major commodity groups over an eight-year period from 1995 to 2002.

While the total value of agriculture has grown at a steady pace, individual commodity groups have behaved differently. Some commodity groups like apiary products and nursery products and flower crops show a steady increase in total value. Other groups like field crops, specialty crops, and livestock & poultry products have remained constant in total value. Vegetable crops and fruit & nut crops have been more erratic, showing upward and downward movements over the eight-year period. Vegetable crops show a higher overall value while fruit and nut crops show a lower overall value. The relative values and percentages for each commodity group have behaved similarly to the corresponding overall value for the group.

Local growers have adopted and implemented a combination of innovative production practices and marketing strategies that have allowed them to remain competitive. The adoption of new production systems and techniques along with a diverse number of crops more adapted to our growing environment have led to more efficient use of resources. In addition, targeting niche markets and market windows, adding value-added activities and products, and diversifying promotion and marketing efforts have allowed them to reach a variety of consumers and expand their market opportunities. Now more than ever, existing and prospective growers will have to be skillful, informed and prepared to overcome the challenges. Most importantly, they must be informed and prepared to capitalize on the many opportunities that may result from the uniqueness of our county and our agricultural industry. In other words, existing and potential growers in San Diego must be skilful producers with a well defined plan if they are to succeed in agriculture.

Summarized Crop Values by Selected Commodity Groups For Crop Year 2005

Planning: The Key to Successful Enterprises

Starting and managing a new business enterprise -- agricultural or otherwise -- or diversifying an existing operation in San Diego County is a challenging task. In addition to motivation and desire for success, it requires extensive research and careful planning. Potential entrepreneurs must avoid critical mistakes to be successful. Whether the business is in operation or just starting out, owners and/or managers need a business plan. It provides them with a comprehensive view of the business or enterprise under consideration. It will help them to "think through" the business and pin point all the details about what they want to do. A business plan will also help identify weaknesses, strengths and important issues that may be otherwise ignored or overlooked. It will give focus and direction, and serve as a road map that will help owners and managers concentrate on what is needed for the business to succeed. Most importantly, a good business plan will help sell the business to yourself and force you to decide whether or not it is feasible before you commit any resources.

What is a Business Plan?

A business plan can be seen as a document that tells the story of a business or enterprise. Even though having a completed business plan is important, writing the plan is as important as the document itself. For a business plan can also be seen as a process, as an interactive document that must be reviewed, updated, adjusted and fine-tuned regularly. This will ensure that the business plan is an effective tool that will help manage the farm business. Business plans may be presented in many different sizes and formats, depending on the type of plan and the type of business. In general, three types of business plans are commonly used. These are the summary plan, the full business plan and the operational business plan. They differ in length and in the amount of detail they require, as determined by the intended use.

What is a Business Plan Used For?

The uses for business plans can be classified as external and internal. *External uses* would include their use to secure loans or financial resources. Lenders may now require formal business plans as part of their loan application process. A good plan can help persuade the prospective lenders and make a difference in securing a loan to finance an agricultural operation. Business plans can also help attract potential partners or financial supports from various sources. Finally, they can help form strategic alliances, joint marketing efforts, joint distribution channels and develop relationships with customers and suppliers. These are critical in agriculture because of the cost savings that may result from joint marketing and economies of scale. *Internal uses* for business plans are the most beneficial for agricultural operators and other small businesses. Business plans can be a great management tool that helps managers anticipate changes and explore alternatives and opportunities on paper before committing any resources. In addition, the process of writing the plan forces managers to think and to set goals and objectives. These in turn provide benchmarks that can help monitor the progress. Finally, the business plan provides focus and commits everyone involved with the business to the goals and objectives identified.

Gathering and Organizing Information for your Business Plan

As the owner of an existing farm or agribusiness or as a prospective owner, the first thing you need to do before you write a business plan is to assess your interests and your resources. This will help determine what you have, what you want and how you may get it. The following format will provide a structure that can help you organize your ideas:

- **First, list the skills and experiences of those involved with the business.** Emphasize skills, abilities and experiences that are related to the business or that will be useful for the operation of your agricultural business or new enterprise.
- **Second, inventory all resources available to start and operate the business.** Documentation of acreage, soil type, topography, location, access, facilities, equipment, time, capital, labor and supplies are only a few examples. Document the kind and amount of support and assistance that is available locally and how important these are for the operation of the business.
- **Third, define the business you are in or you will be in and the direction you want it to go.** Before you commit any resources you should know exactly the type of business you are getting into. Why do you want to start farming (profit, hobby, etc.)? What business will you be in? What are your goals? What is the timeline? How will you achieve your goal(s)? A clearly defined business or enterprise idea will help you research issues, market trends, niches and windows, as well as other opportunities that may be relevant to your business and result in more efficient use of your resources.

Providing complete responses to the questions above will provide most of the information you need for a business plan. Keep in mind that plans, budgets and forecasts are only as good as the information used to develop them. Therefore, you must take the time to do your homework and gather relevant information. This will facilitate the writing process and improve the quality and predictability of your business plan.

Business Plan Outline

There are many formats and outlines that help organize a business plan. Any format or outline you follow should be used as a guide only. You must adapt it to the specific situation of your business or enterprise and address issues you feel are important for you or for whom you are writing the plan. However, it is recommended that your plan be divided into sections or components. This will help organize the information and make the writing process more manageable. In addition, this will facilitate reading the plan once it has been completed. An outline for a business plan is presented below. It includes sections commonly used in business plans with a narrative outlining the type of information needed.

- **The Executive Summary or Introduction** - Should provide a brief, detailed description of your business. It must hook readers to read the whole plan. This is the most concise version of your plan and should include and highlight the major points of your business, your products, marketing, management, experience, etc. If applying for a loan, the summary should include a statement requesting the funds and explaining the need, the amount, and intended uses for the loan.
- **The Business Charter** - This section should define your business and or the type of business you are in. **Who** are you? **What** is the purpose of your business? **When** are you going to begin operations or when are you going to reach your milestones? **Where** are you going to sell your products? **Why** is your business being formed? Answers to these questions will help you develop a clear definition of your business and identify and set short, intermediate and long-term goals.
- **Products or Services** - Describe all crops, products or services you will be selling. Emphasize the unique features of your products and/or value-added activities that make them stand out over the competition. What makes your product different and/or better than the products of thousands

other farmers? Is it the production system, the soil, the origin, the standards for quality, the freshness, the ripeness or the packaging? What specific need, market window or market niche will your products fill. Describe the operating schedule, production and harvest calendar for all crops and products and the expected production volumes for each.

- **Markets and Marketing** - Identify and explain who the potential buyers are and who they will be in the future. Assess the need and demand for all the crops or products you will sell. Explain what the market is, its size, its location and important trends. Evaluate the competition and determine how segmented the market is. What is your targeted share of the market? How will you advertise and sell your crops or products? Will you use wholesale or conventional marketing methods, direct marketing methods or a combination of both? The marketing method(s) used will impact the strategy, distribution and the type of advertising or promotion you use with your crops, products or services.
- **Financial Information** - Prepare records, statements and/or projections that describe the financial situation of the business. What resources are available? What are the sources for and the need for start up funds? Financial statements needed may include an income statement, cash flow statement and a depreciation schedule. For new businesses, personal financial statements and income tax information for the past 3-5 years may be required. Projected financial statements for at least two years may also be needed. A monthly operating budget and a statement of cash flow may be required for the first year of operation. Projections must be consistent with actual performance or other estimates used for the business. Finally, if applying for a loan, a funding request should be included. It should indicate the amount of funds needed, justify the need and explain how the funds will be used.
- **Sales and Costs of Production** - Project sales and expenses for the first year of operation. Determine costs of production and break even analysis. Enterprise budgets may be useful tool for estimating costs of production. Enterprise budgets for a variety of crops are available from UC Cooperative Extension offices. Estimate the cash flow of the business, this will help identify the need for and timing for borrowed funds. It will also help determine the repayment capacity of the business. Regardless of the reasoning, cash flow projections should provide a road map and a true picture of the surplus or deficit of the business.
- **Organization and/or Legal Structure** - The choice of legal structure may affect the actual cost of doing business, the operation and management of the business, the type and amount of taxes, and the level of exposure to risks and liabilities. It may also constrain the transfer of ownership for the farm business. This is a major issue for farms and agribusiness across the United States. Six types of legal structures are available, including *sole proprietorships*, *general partnerships*, *limited partnerships*, *“C” corporations*, *“S” corporation* and *limited liability companies*. Each has specific pros and cons depending on the type and size of the business. You should contact your lawyer or accountant about the pros and cons for each.
- **Management Structure, Key Personnel and Operations** - Explain how the business will be managed on a day to day basis. Provide a description of the skills and experience of everyone involved with the business. Resumes for you and key family members and employees should be included. All duties and qualifications should be clearly stated, with emphasis placed on management or administrative responsibilities and chain of command. It may discuss hiring and personnel procedures, insurance needs, lease or rental agreements, equipment needs, production, delivery and any other issues pertinent to the business.
- **Concluding Statement** - This should summarize the business, and the goals and objectives. This statement should also reiterate your commitment to the success of the business.

Once the business plan is completed and you feel comfortable with the content and structure, review it and discuss it with your banker if you are applying for a loan. If not, then start taking the necessary steps to make your business or new enterprise a reality. You must remember that business planning is a process, and your plan should remain a flexible document that must be reviewed and updated as your business grows or local conditions change. The remaining sections of this directory will provide you with contacts, sources of information and resources that may help you obtain the information you need for your business (plan). It is your responsibility as owner or manager of the business to know what information is available, where to find it, how to get it and most importantly, how to use it. This directory is intended to be a starting point in your search for information.

General Business Information: Starting your own Business

Business Certificate

As of July, 98 the County of San Diego no longer requires individuals, partnerships or corporations doing business in unincorporated areas of San Diego County to obtain a "Business Certificate". Individuals conducting business within city limits must obtain a business certificate for that city. The primary purpose of a business certificate is to indicate that the holder has paid the current years tax. The type of business and the number of employees determine the tax. Your business certificate must be displayed in a conspicuous location at the place of business. The annual fee for a business certificate varies from city to city and is based on annual gross receipts. For example, a business with approximately \$100,000 in gross receipts will pay between \$20 and \$100 for a business certificate depending on the city in which they reside. A business certificate will typically take 2-6 weeks to process; however, the Certificate is valid upon payment of the Business Certificate fee. A business certificate can be obtained from the following locations:

Carlsbad	(760) 602-2495	Lemon Grove	(619) 464-6934
Chula Vista	(619) 691-5250	National City	(619) 336-4264
Coronado	(619) 522-7308	Oceanside	(760) 966-4845
Del Mar	(858) 755-9354	Poway	(858) 679-4217
El Cajon	(619) 441-1669	San Diego	(619) 236-6173
Encinitas	(760) 633-2606	San Marcos	(760) 744-4020
Escondido	(760) 839-4659	Santee	(619) 258-4100
Imperial Beach	(619) 423-8300	Solana Beach	(858) 720-2440
La Mesa	(619) 463-6611	Vista	(760) 726-1340

Fictitious Business Name Statement

If your business is named anything other than your full legal name, e.g. John's Ranch instead of John Doe's Ranch, you will need to file a Fictitious Business Name Statement. The forms and the procedure to file a Fictitious Business Name Statement can be obtained through the San Diego County Clerk's Office. It is recommended that your Fictitious Business Name Statement be filed in person, however it is possible to register by mail. The cost of filing a Fictitious Business Name Statement is approximately \$13. The Fictitious Business Name Statement is in effect immediately upon filing. Your Fictitious Business Name Statement is effective for five years, but must be resubmitted before the expiration date to ensure continuous coverage.

Legal Structure and Articles of Incorporation

Whether you are operating an existing business or starting up a new one, the legal structure you choose may affect your business. The legal structure may affect the actual cost of doing business, the day to day operation and management, the type and amount of taxes to pay and the risks and liabilities to which you may be exposed. It may also constrain the transfer of ownership of your farm business to your children or result in unwanted tax burdens for your spouse. The latter issues have become a major problem affecting the sustainability of farms and agribusinesses across the United States.

There are six basic legal structures available for new or existing businesses. These are the sole proprietorship, the general partnership, the limited partnership, the "C" corporation, the "S" corporation, and the limited liability company. Each type has specific advantages and disadvantages depending on the situation and the type and size of the business. The pros and cons for each should be discussed with your accountant and your lawyer. They should give you the legal advice and help you need to select the structure that will be most beneficial for you and for the profitability, growth and continuation of your business. A survey of local farmers indicated that 78 % of farms in San Diego County operate as individually or family owned businesses, corporations (either family held or publicly owned) account for 12 %, estates or trusts account for 4 %, partnerships account for 3 % and 3% of growers reported "other" structure.

Businesses have the option to file for articles of incorporation in the state of California, depending upon the legal structure they choose. This document enables the owners or partners of a business to operate as a stock corporation. Filing information and forms can be obtained from the State of California, Secretary of State. The cost of filing for Articles of Incorporation is approximately \$815. This fee includes both a filing fee (approximately \$115) and a tax payment (approximately \$700). Once filed, Articles of Incorporation are processed and ready for pick-up in approximately 1 week.

Seller's Permit

If you sell taxable merchandise or provide a taxable service in the State of California you must obtain a Seller's Permit. Taxable merchandise includes, but is not limited to, all processed food products and all ornamental horticulture products. You should contact the local State of California Board of Equalization Office for your specific agricultural product. There is no fee required to obtain a Seller's Permit. If applied for in person, it is possible to have the permit processed in 1 day. Otherwise, a Seller's Permit can be obtained through the mail in approximately 4-6 weeks. Seller's Permit applications can be obtained at the following offices:

- State of California, Board of Equalization

San Diego Office

1350 Front Street, Room #5047
San Diego, CA 92101
Phone: (619) 525-4526
Fax: (619) 525-4548

North County Office

334 Via Vera Cruz, Suite 107
San Marcos, CA 92078
Phone: (760) 510-5850
Fax: (760) 510-5876

Sign Permit

Regulations and permits regarding signage for businesses in the unincorporated areas of San Diego County can be obtained through the following:

- County of San Diego
Department of Planning and Land Use
5201 Ruffin Road, Suite B
San Diego, CA 92123
Phone: (858) 565-5981

Businesses within city limits should contact the corresponding office listed below.

Carlsbad	(760) 602-4612	Lemon Grove	(619) 464-6934
Chula Vista	(619) 691-5101	National City	(619) 336-4310

Taxes and Taxation

- State Sales Tax and Use Tax**

The State of California requires that all businesses that sell merchandise must collect sales tax on all taxable items. The guidelines for taxable and nontaxable merchandise, specifically for

agricultural businesses, are extremely complex and exemptions should be discussed with the State Board of Equalization on a case by case basis. The State of California also requires that a use tax be paid on all taxable items purchased by an operation in order to conduct business. Information and assistance with filing state sales tax and use tax should be directed to the State of California, Board of Equalization.

State of California, Board of Equalization

San Diego Office

1350 Front Street, Room #5047

Fax: (760) 510-5876

- **Business/Personal Property Tax**

Business/Personal Property Tax is appraised annually by the County of San Diego Assessor's Office. The business owner is required to file a property statement, which details the value of all supplies, equipment and fixtures. Business inventory such as sales merchandise are not included in this assessment. Property Tax, which includes real estate and existing structures, is assessed by the Tax Collector's Office and is based on the California Consumer Price Index. The property tax rate is 1%, plus any bonds, fees, or special charges. Information and assistance with filing Business/Personal Property Tax forms should be directed to County of San Diego, Assessor's Office.

County of San Diego Assessor's Office

9225 Clairemont Mesa Blvd.

San Diego, CA 92123

Phone: (858) 505-6262

- **State Income Tax**

As the owner of a business you are required to file State Income Tax returns. Your state income tax is normally filed on a quarterly basis and calculated on $\frac{1}{4}$ of your estimated annual tax debt. The forms you file and your annual tax debt will be determined by the structure in which your business is organized. State Income Tax for businesses organized as Sole Proprietorships, Corporations, General Partnerships or Limited Liability Partnerships should consult the Franchise Tax Board, your attorney and/or your tax consultant for specific requirements relating to your individual situation. Questions about estimating you annual tax debt and filing California State Income Tax forms should be directed to the Franchise Tax Board.

State of California

Franchise Tax Board

5353 Mission Center Road, Suite #314

San Diego, CA 92108

Phone: (800) 852-5711

- **Federal Income Tax**

As the owner of a business you are required to file Federal Income Tax returns. Your Federal Income Tax is normally filed on a quarterly basis and calculated on $\frac{1}{4}$ of your estimated annual tax debt. As with State Income Tax, the forms you file and your annual tax debt will be determined by the format in which your business is organized. Federal Income Tax for businesses organized as Sole Proprietorships, Corporations, General Partnerships or Limited Liability Partnerships should consult the Internal Revenue Service, your attorney and/or your tax consultant for specific requirements relating to your individual situation. Questions about estimating your annual tax debt and filing Federal Income Tax forms should be directed to the Internal Revenue Service.

Agricultural Business Information - Starting your own Agricultural Business

Land Use and Zoning

As a new agricultural business you will need to know about the regulations that apply to your potential business location. Zoning and Land Use information can be easily obtained from the County of San Diego, Department of Planning and Land Use. Through the parcel number and/or physical address of the site, the Department of Planning and Land Use will be able to provide you with the approved usage, as well as possible restrictions, for your future agricultural business site. The Department of Planning and Land Use will also be able to assist you with questions regarding existing and planned facility use.

San Diego, CA 92123
Phone: (858) 694-2960 or (858) 565-5981

Land Tenure and Land Leasing

The economics of today's agriculture make leasing or renting land an important component for San Diego County's agricultural industry. Local land prices are more dependent on real estate trends than on their true value as an agricultural input. Even though 87 % of local farmers owned the land they farm, leasing or renting land is the best and perhaps the only alternative for prospective growers to start a new farm or to expand an existing operation. Agricultural entrepreneurs should be more concerned with controlling, rather than owning the land and other resources they need to farm. The capital investment required to buy land and the resulting risk are often too large. Leasing or renting can provide the control they need and allow them to "try things out" without having to commit huge amounts of capital to purchase land or other resources.

The terms leasing and renting are often used interchangeably when talking about land, the main difference being the length of the agreement. Cash rents and crop shares are the two main types of leases available for growers. However, a variety of combinations exist that differ in how risk is spread among the contracting parties. A variety of leasing agreements, sample contracts, and publications are available for your review and examination at the San Diego County Farm and Home Advisors Office. The following is a list of agencies and organizations that can provide information on buying or leasing agricultural land in San Diego County.

- San Diego County Farm Bureau

Water Use and Conservation

Water is the life-blood of agricultural operations whether it is supplied by rainfall or by irrigation. Producers in San Diego County face a unique and sometimes difficult challenge when dealing with water related issues. Our local growers pay some of the highest prices for water in California. Agricultural water rates can be as high as 30 times those of the Central Valley Project or Imperial Irrigation District. As a result, topics such as water quality, water availability, water sources, irrigation management and water conservation must be carefully addressed when discussing the development of a new agricultural enterprise. The following offices provide information, instruction and assistance to new agricultural business owners. These departments should be consulted during the planning phase of your operation to help insure the success of your business.

Crop Selection

San Diego County's mild climate allows local farmers to grow over 200 crops commercially. The crop options will vary depending on the specific location of the farm or property being considered. Factors such as land availability, soil type, climate, initial financial investment and expected return, market demand, water quality and availability, and personal interests are just a few of the factors that must be considered when selecting your crop(s). Growers must give special consideration to the market demand for prospective crops. You can be the best grower of any crop, but it does not do you any good if you cannot sell what you grow. Therefore, crop selection is an entrepreneurial decision. The final determination of what crop or crops a grower decides to produce can only be made by the individual grower himself.

New agricultural producers should start by researching the land use and practices in the community they are considering for their new farm enterprise. Factors such as what is currently being produced in the area and the views of neighboring producers and suppliers can be extremely enlightening when researching your potential crop enterprise. Many sources of information are available to assist prospective agricultural operators with the crop selection process. The University of California Cooperative Extension, Farm and Home Advisor Office is staffed with advisors who can assist new growers to evaluate their individual situation and to make an educated and informed decision with regards to crop selection. Several agencies including the San Diego County Farm Bureau, the County and State Department of Agriculture, commodity boards and local grower or trade associations can also provide a wealth of knowledge when researching a specific crop. Once again, it is important to emphasize that crop selection is an individual decision that must be made by the grower. Although outside agencies and individuals can be extremely helpful in weighing the pros and cons of specific crops, the ultimate selection of what to grow must be made by the grower.

Pesticide Use and Regulations

As a new agricultural producer, you will likely need to utilize pesticides as part of your production practices. The County of San Diego, Agriculture, Weights and Measures Department enforces the laws which regulate the use of pesticides. Because the decision of what materials to use and when to use them are case specific, agricultural producers must show they are knowledgeable about their use and safety by obtaining a Certified Private Applicators Certificate from the County Agricultural Commissioner’s Office. To obtain this certificate, one must take a test administered by that office. The study guide for the test “Pesticide Safety-A Reference Guide for Growers” can be purchased at the Farm and Home Advisors Office. Alternatively, a pesticide recommendation must be obtained by a licensed Pest Control Advisor (PCA). Most agricultural chemical supply companies have at least one PCA on staff. The PCA and the Agricultural Commissioner’s Office will help the grower determine the types of permits and licenses the grower must have in order to apply the pesticide. Record keeping is an important and legal part of using pesticides. Again, the Agricultural Commissioner’s Office can help the grower in that regard.

Nursery Permits and the Pest Exclusion/Nursery Program

The Agricultural Commissioners Offices issue shipping permits, nursery stock certificates, and other required certificates to facilitate movement of nursery stock in trade. The Pest Exclusion/Nursery Program is coordinated by the California Department of Food and Agriculture and is administered in the county by the Agricultural Commissioners Office. This program assists the nurseryman with pest control and eradication; licenses the sale of nursery stock; maintains a list and publishes a directory of nurserymen and locations where nursery stock is sold; and registers or

certifies certain plants that are inspected and tested for specific virus or virus-like diseases and other pests.

Compost Regulations

The utilization of compost and composting can be an economically and environmentally desirable option for new producers. Depending on the scale of your operation, composting may be as simple as building a “back-yard” compost pile or as complex as creating a green-waste recycling operation. Issues related to land use, air pollution, and environmental health must be addressed when considering composting in your operation. The following departments should be contacted to determine the possible regulations and permits that will be needed by your operation.

Organic Farming & Organic Registration

New agricultural operators or existing operations interested in the production or processing of organically grown agricultural products should contact the County of San Diego Agricultural

Commissioner's Office. California law requires registration through the Agricultural Commissioner's Office for individuals interested in growing registered organic products. The Agricultural Commissioner's Office is also responsible for enforcing the provisions for organic production as specified in the California Organic Foods Act of 1990, in the Sherman Food, Drug, and Cosmetic Law. There are no Federal standards in place as of this printing. However, the United States Department of Agriculture and the National Organic Standards Board have been trying to develop them for the past several years. All application materials and necessary information can be obtained directly from the County Agricultural Commissioner's office. An onsite inspection will also be required as part of the organic registration process. The fees to pay for the organic registration and the time required to complete the application process depend on the size and scale of operation. Once an operation has been registered organic, there are limitations with regards to the practices and inputs that growers can use to grow their crops. A list of practices and/or products allowed is provided with the application materials.

- County of San Diego, Agriculture, Weights and Measures Department
5555 Overland Avenue, Suite 3101
San Diego, CA 92123
Phone: (858) 694-8988
www.sdcawm.org

Organic Certification by Third Parties

Third party certification is a very common practice among organic producers. This type of certification is optional, and not required by law. However, third party certification may provide an edge to organic growers when trying to differentiate their products in what is becoming a very competitive industry. In addition, it may also provide more credibility and legitimize their operations in the eyes of consumers. Finally, it may be a requirement on the part of wholesalers, packers, shippers and processors of organic foods, i.e. those that buy from the grower. They may feel this is an extra step in trying to provide a quality product.

Third party certification of organic production is performed by private organizations that specialize in this type of activity. There are many such organizations that operate in the United States and several that operate in California and in San Diego County. They are fairly consistent with the Agricultural Commissioner's office with regard to practices and products allowed. However, as with any other business activity, the fees assessed, the documentation required, the scrutiny of the application process, materials and on-site inspection and the credibility of the certification will depend on the specific organization and the type of certification desired. Growers or processors interested in third party certification should shop around to ensure they get the service they want at a price they can afford. Also, growers should make sure the certification they obtain meets the requirement of their buyers, brokers or consumers, i.e. those that will buy their products. The following is a list of several organizations that local growers are currently using or have used to obtain third party certification of organic or biodynamic production practices.

Weighing and Measuring Devices

The mission of Weights and Measures is to promote value comparison and fair competition in the marketplace. This is established by ensuring accuracy of market standards. Weights and Measures functions include the testing of all commercially used devices such as scales, gas pumps, water vending machines, taximeters, privately owned utility meters and liquefied petroleum products, weighmaster enforcement (certificates issued for weight, measure or count), and advertised price accuracy (scanners).

Commercial use of a weighing or measuring device requires a valid registration certificate. The current registration fee is \$20 per device, with a reduced rate for multiple devices at a single location. Devices are normally inspected on an annual basis. For further information, please contact the Weights and Measures staff.

Financial Assistance

Starting an agricultural business can be an expensive undertaking. It is critical to develop a sound financial business plan before you embark on this venture. The process of developing the plan will help new and existing agricultural producers to estimate and forecast the level of sales and the cash flow for their business. This will allow them to determine the need and timing for borrowed funds and to explore all the alternatives available to secure the funds they need to finance their business. The majority of existing growers in San Diego County finance their operations with private funds. However, there are a variety of sources that growers could potentially use to borrow money. Private banks, production credit associations, equipment dealers, suppliers, cooperatives, packers, shippers, grower associations and insurance companies are some examples of private organizations and institutions that lend money for agricultural operations.

In addition, a variety of government agencies and non-profit organizations can provide financial assistance through a variety of programs, contracts or grants. These programs usually lend at lower interest rates and can include direct loans, cost-share agreements or contracts and loan guarantees through private banks. The loan funds obtained can be used for a variety of purposes including farm and home ownership and operating loans. Regardless of the source for funds you plan to use, the competition for funds is tough. Having a sound, well written business and financial plan will be extremely helpful in selling your business to your prospective lender and in securing the funds you need. Also, it is very important that you communicate with your potential lender and discuss your ideas and all the possibilities that you are considering or should consider. The following is a list of agencies and organizations that provide financial assistance to growers in San Diego County.

Markets and Marketing

San Diego County growers have a variety of conventional and direct marketing alternatives available to them locally. The potentially large size of the local and regional market combined with the ag-urban interface that characterizes local agriculture and the diversity of crops grown in the county agriculture offer unique opportunities for growers to sell their products. Large growers tend to use conventional channels and small-scale growers more often use direct marketing channels. Most growers have the flexibility to use a combination of conventional and direct marketing methods to sell their products. This helps diversify the marketing options and potentially improve the returns from their operations. However, it is critical that growers take the time to research their potential markets. They must understand market trends and preferences of local consumers so they can identify needs, niches, and market windows that they might fill with crops they grow or products they sell. They must also evaluate their marketing options and determine the strategy or strategies that are best suited for their products, for the size of their operation and for their personality. Not every marketing alternative will work for everyone. Therefore, growers must develop a marketing plan that will allow them to find the right strategy or the right marketing mix of strategies.

▪ Conventional or Wholesale Marketing

Examples of conventional and wholesale marketing alternatives include large lot direct sales, wholesalers, shippers, packers, brokers, commission merchants, cooperatives, etc. These marketing channels often involve a middleman and usually minimize the involvement of the growers with regards to marketing the crops or products. These methods are best suited to crop growers with considerable acreage who may have difficulties selling all of their large volumes of products through direct marketing methods. In addition, growers who produce crops whose harvest requires large amounts of labor or specialized equipment, or who lack the equipment and facilities to handle their crops, or who do not want to get involved in the marketing of the crops, may find wholesale marketing methods very useful. Appendix A provides a listing of conventional marketing outlets available in San Diego County for most agricultural products grown locally. Care should be taken in selecting those who handle the sale of your agricultural

products. Unscrupulous consignment sellers and wholesalers have bilked many unsuspecting new growers out of much of the profits that they should have received. More specific information about conventional or wholesale marketing methods can be obtained from the University of California Cooperative Extension Office.

▪ **Direct Marketing**

Direct Marketing takes place when growers sell their product “directly” to the consumer. This method of sales enables the grower to increase their profit margin compared to conventional wholesale marketing methods. The fact that agricultural production in the county occurs in an ag-urban interface provides immediate access to a potentially large market. This situation fosters the use of direct marketing alternatives. Types of direct marketing include Certified Farmers’ Markets, Roadside Stands, U-pick Operations, Community Supported Agriculture, Buying Clubs, Catalogs, Rent-a-Tree Operations, and Subscription Agriculture. The development of roadside stands and other on farm direct marketing may require special permits from local governmental agencies. Consult your insurance agent about potential liability issues that can accompany having public access to your farm property.

Although direct marketing methods require additional labor for the grower, the use of one of these methods or a combination of direct marketing methods may allow small-scale operators to increase their profits. This may also allow growers to diversify their revenue stream by adding value to the products they sell or engaging in other activities related to agricultural tourism. In addition, an important byproduct of direct marketing activities is the opportunity to increase community awareness of local agriculture, thereby expanding the support for local growers. Detailed information about direct marketing can be obtained from the University of California Cooperative Extension, Farm and Home Advisors Office.

Certified Farmers' Markets and Certified Producer Certificates

There are approximately 29 Certified Farmers’ Markets that operate within San Diego County. Certified Farmers’ Market are the most common form of direct marketing that local growers use to market their products directly to the consumer. Certified Farmers’ Market regulations are established in the California Code of Regulations, and local certification is coordinated and approved by the County of San Diego, Department of Agriculture, Weights and Measures (Agricultural Commissioner’s Office). Growers interested in participating in a local Certified

Farmers' Market must have their crops certified and must obtain a Certified Producer's Certificate from the Agricultural Commissioner's Office. This requires growers to complete and submit a Certified Producer's Certificate application form and to have their growing site(s) inspected by an official from the Agricultural Commissioner's Office to verify each product to be sold at a Certified Farmers' Market. The certification process will take approximately 2 to 4 weeks to complete. The costs included in obtaining a certificate include a \$35 Certified Producer's Certificate Fee, an Inspection Fee (\$60 hourly rate), and a mileage charge that is based on a predetermined "zone" in which the growing grounds are located. A grower is restricted to selling only those crops that appear as "certified" on his or her certified producer's certificate. In addition, Certified Farmers' Markets are very competitive and growers must first contact the manager of the CFM(s) of their choice to inquire about market openings. Doing this early on in the process will give a grower time to explore other options. A listing of Certified Farmers' Markets operating in San Diego County is provided in appendix A.

Human Resources - Working Your Farm Solo or As a Team

Staffing your New Agricultural Enterprise

The hiring and management of human resources in production agriculture is a very complex activity. As a new agricultural business operator or as the operator of an existing farm you are faced with the decision to hire or not to hire help. You must determine whether you can supply all the labor needed to operate your business by yourself or if you will require help and assistance from others (employees). If you chose to hire employees to assist with your operation, you will need to determine the number and type of employees that will best suit your operation. The University of California Agricultural Personnel Management Program (UC APMP) is an excellent starting point for questions related to agricultural and business employment, labor contractors, employee housing and other legal issues affecting the supply and management of labor in agriculture. The UC-APMP has a variety of materials and periodicals in printed or electronic form that can help you address specific problems you face in your operation. In addition, these publications can be excellent reference materials that are much needed by agricultural business managers. Information about this program and other sources of information that may help you with your labor/employment management decisions are provided below.

- UC Agricultural Personnel management Program (APMP)
207 Gianini Hall
Berkeley, CA 94720-3310
Phone: (510) 643-8319
Fax: (510) 643-8911
URL: apmp.berkeley.edu

Tax Identification

As an employer your are required to obtain an Employer Identification Number (EIN). The State of California will refer to this nine-digit number as your Federal Employer Identification Number (FEIN). To obtain an EIN, you simply fill out the Federal Form SS-4. This number will need to be included on all tax items you send to Federal and State tax agencies.

- United States Government, Internal Revenue Service (IRS)
880 Front Street, Room 1N1
San Diego, CA 92101
Phone: (800) 829-1040
Phone: (714) 360-2094 (local)
- State of California, EDD, Tax Office
San Diego Office
3110 Camino del Rio South, Suite #100
San Diego, CA 92108 (This location offers in-person employment tax service)
<http://www.edd.ca.gov>

North San Diego County Office
240 West 2nd Avenue
Escondido, CA 92025 (This location offers in-person employment tax service)
<http://www.edd.ca.gov>

Worker’s Compensation Regulations and Benefits

California State law requires that all employers have a Workers’ Compensation Insurance policy to cover their employees in case of a work-related injury. Most commercial insurance companies can provide Workers’ Compensation insurance. As an employer, it is to your benefit to shop around for the policy that best suits your operation. Your local Chamber of Commerce, your local small business associations, and the San Diego County Farm Bureau’s list of “Partner” agencies are good starting points to get recommendations for possible carriers. Your chosen carrier and/or the State of California Division of Workers’ Compensation Office can answer general questions regarding Workers’ Compensation requirements and regulations.

- State of California, Industrial Relations Department
Division of Workers’ Compensation
1350 Front Street, Suite #3047
San Diego, CA 92101
Phone: (619) 525-4589
Phone: (800) 736-7401
www.dir.ca.gov

Non-US Citizen Employment Status

The United States Government, Immigration and Naturalization Service is available to assist employers with issues related to work permits, immigration and naturalization of employees. The INS can also assist you with the process of obtaining exemptions and proper documentation necessary for the seasonal or temporary employment of non-US citizens.

- United State Government
Immigration and Naturalization Service
880 Front Street
San Diego, CA 92101
Phone: (619) 557-5570

General State Requirements

If, as an employer, you pay wages totaling more than \$100 in a calendar quarter, you are required to register with the State of California, Employment Development Department (EDD). When you register with EDD you will be assigned a State Employer Account Number. This number will identify your businesses State tax records. Employers are required to report and pay the following four employment taxes: Unemployment Insurance, Employment Training Tax, State Disability Insurance and State Personal Income Tax. The employer pays the Unemployment Insurance and Employment Training Tax. State Disability Insurance and State Personal Income Tax are withheld from the employee’s wages by their employer and then paid to the State by the employer. All State payroll taxes are reported on a quarterly basis using Form DE 6, Quarterly Wage and

Withholding Report. Additionally, employers are required to file Form DE 7, the Annual Reconciliation Return. All payments are to be submitted directly to EDD using Form DE 88, the Payroll Tax Deposit coupon. The frequency of these payments will be determined by the amount reported. The following agencies will assist you with employee related issues pertaining to State requirements.

- State of California, EDD, Tax Office
San Diego Office
3110 Camino del Rio South, Suite #100
San Diego, CA 92108
(This location offers in-person employment tax service)

North San Diego County Office
240 West 2nd Avenue
Escondido, CA 92025
(This location offers in-person employment tax service)
- State of California, Industrial Relations Department
Division of Labor Standards
8765 Aero Drive, Suite #120
San Diego, CA 92123
Phone: (858) 467-3002

General Federal Requirements

As an employer you are required to withhold from employees three types of employment taxes. These taxes include employee Federal Income tax, Social Security (FICA) tax, and Medicare. You must also report and pay matching contributions for Social Security and Medicare for each employee. These withholdings and payments are to be paid to the IRS on a quarterly basis using Federal Tax Form 941. You are also required to pay Federal Unemployment Tax Act (FUTA) Tax. Deposit for this tax are to be made quarterly with Federal Tax Deposit Coupon (Form 8109). Each year you will then file a Federal Unemployment Tax Act (FUTA) Return, Form 940. Any additional FUTA taxes due are to be submitted with this return. The following agency will assist you with employee related issues pertaining to Federal requirements.

- United State Government
Internal Revenue Service (IRS)
880 Front Street, Room 1N1
San Diego, CA 92123
Phone: (800) 829-1040
Phone: (714) 360-2094 (local)

Contracted and Temporary Assistance

Another staffing option available to business owners is contracted and/or temporary assistance. Individuals interested in receiving assistance with on-going projects such as record keeping and accounting or assistance with specific projects or tasks may want to explore this option. With

contracted and temporary assistance, the employer is relieved of many employee-related issues. The business owner contracts with a company or agency to have a specific project completed. For an agreed upon fee, the contractor assumes not only the responsibility of completing the task and/or project, but also becomes responsible for all employee related issues including but not limited to hiring, supervision and employee tax reporting. A detailed and well thought out contract between an employer and a reputable contractor can relieve the employer of many of the employee-related burdens. There are many contractors and temporary agencies available in the community. Business owners interested in exploring this option should contact fellow agricultural businesspersons and local business associations for contractor/temporary agency recommendations.

Health & Food Safety - Protecting the Quality of your Product

Food Handling and Processing (Retail and Wholesale)

Food handling and processing are regulated by two agencies in San Diego County. The agency you work with is determined by the method by which you sell your product. If you are planning to sell your product to a wholesaler you will probably need to obtain a permit from the California State Food & Drug Branch. Producers interested in selling their product directly to the public will need to contact the County of San Diego Department of Environmental Health.

The three major methods by which producers sell their product directly to the consumer include Farm Stands, Certified Farmers' Markets, and non-certified markets such as local swap meets and street fairs. If you choose to sell your product from your farm stand you are exempt from obtaining a Food Handling Permit. If you choose to sell your product at a Certified Farmers Market you will not need to obtain additional permits. As a Certified Producer you are included in the Certified Farmers' Markets' Food Handling Permit. If you choose to sell your product at a non-certified market (or another location other than your farm) you are required to obtain a Mobile Food Unit Health Permit. This permit costs \$70/year and must be renewed annually.

If you intend to utilize any form of processing you have two options available to you. You can have your product processed at an approved food processing facility (Permitted Facility). There are no additional charges or permits required if you use an approved facility. If you choose not to use an outside facility, your next option is to build your own facility. This option may or may not be cost effective depending on the amount of processing used by your agricultural business. Once you have had your facility approved as a "Permitted Facility" your Food Processing Health Permit is \$315/year and must be renewed annually.

- Retail Operations
County of San Diego
Department of Environmental Health
1255 Imperial Avenue, 3rd Floor
San Diego, CA 92101
Phone: (619) 338-2222

- Wholesale Operations
State Food & Drug Administration
1350 Front Street
San Diego, CA 92101
Phone: (619) 525-4108

Quarantine and Protection

If you have the need to import or export plant and/or animal products in San Diego County as part of your agricultural operation, you will need to contact the Quarantine and Protection Division of the County of San Diego, Agricultural, Weights and Measures Department. This office will inform you about the current list of "affected" products for San Diego County as well as the current regulations that are being imposed by potential export destinations. If your product is affected by quarantine regulations, the County of San Diego, Agricultural, Weights and Measures Department

will guide you through the proper process and will advise you of any permits (including San Diego and/or the ultimate destination) that are needed to move your product.

- County of San Diego
Agricultural, Weights and Measures Department, San Marcos Office
334 Via Vera Cruz, Suite 150
San Marcos, CA 92078
Phone: (760) 752-4700

Nutrition and Food Safety Education

Agricultural producers interested in educating their consumer base about issues related to nutrition, food safety, and/or food science can contact the University of California Cooperative Extension, Home Advisors Office. This office provides educational information regarding consumer-related topics such as preparing and storing food safely, nutritional value, and product utilization. The Home Advisors Office is available to answer individual questions and is an excellent referral service for food related issues.

- University of California Cooperative Extension
Farm and Home Advisors Office
5555 Overland Avenue, Building #4

Legal Issues - Protecting Your Business

Business, Agricultural and Employee Related Assistance/Referrals

As the operator of an agricultural business it is to your benefit to develop a network of legal assistance that can assist you with legal matters related to agricultural issues as well as general business and employee issues. The following offices can refer you to individuals and agencies that specialize in your specific area of concern. As with all sound business practices, it is advantageous to develop these relationships before you have a need for their services. In addition to assisting with specific situations, your legal reference will assist you proactively by forecasting potential volatile situations. Developing a legal network before you have a need to utilize its services will give you the ability to “shop around” for individuals that you feel will best suit your operation.

- Lawyer Referral and Information Service of San Diego County Bar Association
1333 7th Avenue
San Diego, CA 92101
Phone: (619) 231-0781
1-800-464-1529
Fax (619) 338-0042
E-mail: bar@sdcba.org
<http://www.sdcba.org/LRIS/>

This office can provide you with information and referrals specific to:

1. Business Specific Assistance/Referrals
 2. Agricultural Specific Assistance/Referrals
 3. Employee Specific Assistance/Referrals

Appendix

A. Certified Farmers' Markets (CFMs) & Harvest Calendar

The following is a list of Certified Farmers' Markets in San Diego County organized by day of operation. These Farmers' Markets are certified by the State Department of Agriculture, ensuring that the produce is being sold by the grower, is grown in California and meets all California quality standards. Visiting any of these markets will let you experience local agriculture. A harvest calendar showing the availability of fruit and produce at local CFMs is also provided. (Revised 1/06)
